Thessaloniki, Greece. 19-22 November 2009

## Background

The present pilot study was the adaption and validation of receptive and expressive language tests' for Greek children aged from 14 years till 14 years and 11 months. The 3rd edition (2000) - used in this research - of ROWPVT and EOWPVT was originally created by Rick Brownell in 1985.

## Materials and methods

The commercial versions of the tests were adapted in Greek language by a linguist, three speech language therapists and 2 native speakers of Greek language, having proficiency in English, and two native speakers of English having proficiency in Greek, and changes were contacted, for the best representation of the Greek version. In this research took part 100 participants (m:50, f: 50) recruited from Greek Schools at the region of Ioannina and Igoumenitsa. The sample was independent from origin and socio - economic situations. Also an ENT, neurological and a psychological examination were also requested, so no medical problems could probably influence the test results.

## Results

Statistical analysis of the data revealed that the results obtained are generally consistent other results reported. No statistically significant differences were found

according or sex. Also reliability and validity test were contacted and showed high criterion (a - Chronbach = .812, & .848).

## Conclusions

The test appears to be sensitive to that age for the Greek population and presents satisfactory criterion, internal consistency, temporal stability, interrater reliability. Also the test showed high content validity, as the participants assessed demonstrated clear patterns of responses, but further changes must be done for the Greek version in clinical and research settings.
